
Subject: Hey

Dr. Jill Sweazy here...

Just wanted to say hi and thank you for signing up.

I hope you're ready for a positive change...

Because over the next few days, I'm going to share the exact method my husband and I used to conceive our baby girl.

(After 4.5 YEARS of trying...)

And it worked for others, too.

Streaks of "big fat negatives" turned into positives and 9 months of bliss as they all prepared to welcome their newborns..

But more on that later...

For now, I just want you to know that you're in good hands...

Because I know what it's like to see people out with their newborns and trying not to get jealous...

Questions from friends/family/IN-LAWS making you feel like something's wrong with you...

(My husband and I are both doctors.

You can imagine the extra "third degree" that got us...)

Or hearing "just keep trying...it's only been ___ months!"

...all while everyone else seems to get pregnant just by looking at each other!

Sounds familiar, right?

Yeah, it can be a huge drain...

But you're not alone.

(About 20% of all couples fail to conceive in their first year of trying...)

And I'm here to help you.

Just be sure to add my e-mail to your contacts so you get what I'll be sending.

And in the meantime, feel free to hit reply and share your story or any questions you might have!

Talk to you soon,
Dr. Jill

By the way - What I'm going to share with you can be done safely even if you:

- Are in your late 30's or 40's...
- Have PCOS...
- Have had OV problems and/or missed periods...
- Your partner has a low sperm count...
- Don't want use IVF or expensive drugs...

I'll tell you more about it shortly.
